

# Intermediate Full Stack Developer

Full-Time Position

Remote,

Toronto, Ontario preferred

## **Who we're looking for:**

The Intermediate Full Stack Developer is an experienced developer with a genuine passion for implementing secure, stable, scalable yet elegant web applications (including the occasional UI problem) within a B2B environment, and coming up with clean solutions using the latest Javascript tech.

The ideal candidate would be someone who is zealous about designing and implementing functional software solutions. They would also be intimately familiar (and up to date) with their development ecosystem – making sound decisions when it comes to choosing the right tool or library for the job.

## **What you'll do:**

- Contribute to both client-facing and internal applications development, while delivering a great UI experience.
- Support multiple projects, implement refinements to our APIs and full-stack cloud applications – either independently or as part of a team.
- Participate in design decisions and collaborate in technical reviews.
- Be a gatekeeper of the codebase and ensure that it stays stable, readable, and free of technical debt, while building & improving code across the entire stack.
- Identify opportunities for improvement and make constructive suggestions for change.
- Participate in development opportunities including training.

## **Requirements:**

- 3-5 years of experience as a professional software developer.
- Expert-level familiarity with modern Javascript (ES6), intimate knowledge of the JS ecosystem (tooling, libraries, etc.), and writing idiomatic Javascript code.
- Web development knowledge (i.e. HTML, CSS, JS) and REST APIs, and a high level familiarity with front-end frameworks, especially React.
- Understanding of performance implications and scalability of code.
- Strong familiarity with software fundamentals such as data structures, algorithms, and databases.
- Keenness for writing good, meaningful tests and maintaining thorough test coverage.
- Well developed written and verbal communications skills, including the ability to read, write, and speak English.
- Ability to legally work in Canada or the US.

## **Great to have:**

- B.Sc. degree in Computer Science or related discipline.
- Experience with the AWS ecosystem of products – not just using S3 and EC2.
- Practical experience within a serverless-first environment.

- Professional background in Financial Services and/or start ups.
- Hands-on know-how modifying or maintaining large, complex code bases.
- An entrepreneurial attitude, i.e. willing to roll up their sleeves and solve complex, all-hands-on-deck problems.

### **Our Tech Stack:**

- Javascript codebase: NodeJS, Express.
- React front-end.
- REST, Socket.IO, GraphQL.
- PostgreSQL DB, Sequelize ORM.
- Serverless Infrastructure: AWS—including Lambda, DynamoDB, Step Functions, Cognito, EventBridge, S3, SQS, and many more.

### **Benefits:**

- Amazing company culture
- Fully remote first/remote always
- HSA/WSA
- Stock Options
- And more!

### **About Us:**

There is a \$28 Trillion hole in retirement savings plans. And it's growing. Each year millions of Americans who contribute to their 401(k) ask themselves "will it be enough?" And for many of us, a downturn in the stock market is all that stands between enjoying our retirement nest egg, or outliving it.

We built Micruity to simplify retirement income, because saving for your retirement is only half the battle. Our API suite and infrastructure connects recordkeepers, life insurers and asset managers to build and distribute lifetime income products that pensionize retirement income to help every American save for a more secure retirement.

### **Equal Opportunity:**

Micruity is an equal opportunity employer.
